Techie Tips: How to...

Have you got Storage Problems?

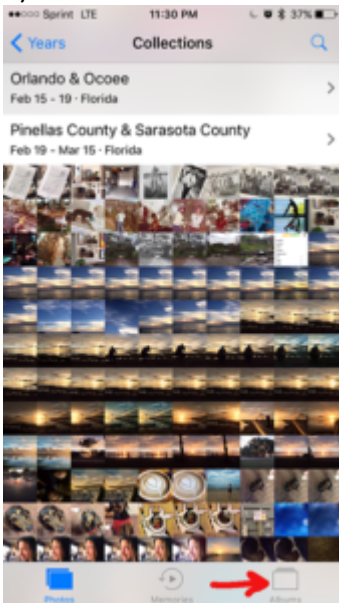

iPhone Photos: make more room on your phone!

In the latest iPhone OS updates, our friends at Apple decided we needed a bit more “oops room” and added a “Recently Deleted” folder in your Photos App. The recently deleted has become the bane of existence for many clients, as it holds every photo for 30 days from deletion before purging them completely. 30 DAYS – kind of like a detox program! They want to make sure you haven’t made a mistake.

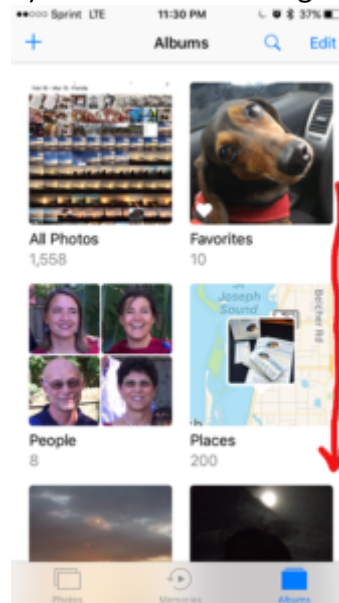

Here are the steps to permanently clear your iPhone of those photos and make room for your next viral hit!

1) Go to Photos → Select **Albums**

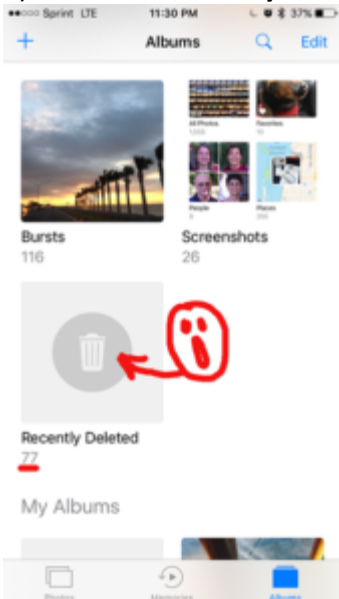

change to Album View

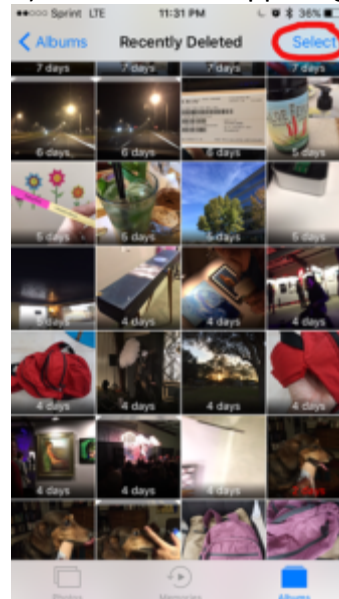

2) Scroll down through Albums

3) Select “Recently Deleted”

4) Hit **Select** in upper right corner

5) Drag your finger from top row over and down to multiple select photos (rather than 1-at-a-time)

Select Delete in the lower left

6) Confirm Delete of items

7) This area should now be clear!

8) Your storage size should indicate a larger number for available space & less space used

And that process should make a big difference if you have already been deleting and still couldn't make space! I absolutely advise that you go in regularly and delete those extra photos, or clear out the "bursts" & videos you don't need! This saves on your iCloud space for backups as well – especially if you haven't changed the defaults! And if you ever need my help, I am just a phone call away!
